| More work is needed on energy measurement. Can we have metrics that are inputs to algorithms, normalized or made relative in some way? | 2     |
| + Energy efficient protocols, eg. env aware/footprint routing metrics  | 0     |
| Efficient software: less resources to do the same,   | 0     |
| Have a well developed multicast protocols (a promise in IPv6 but not really working)   | 0     |
