

BIWG Next Retro

We gather here the ideas of the next retro

| What went well | Votes |
|--------------------------------------------------------------|--------------|
| Creating the hotfix release was super easy. | 0 |
| Portal itself "just" worked, when migrated to a different VM | 0 |

| What can be improved | Votes |
|------------------------------------------------------------------------------------------------------------------------------|--------------|
| How does one run smoke tests on a hotfix release? | 0 |
| We need to be more aware of Portal's external dependencies - e.g. Unibas' SMTP server, Keycloak config, DNS, IP whitelisting | 0 |
| We should keep Portal and service-deploy in sync - e.g. introduce tags on service-deploy | 0 |
| Turning a staging instance into a production instance breaks the db | 0 |
| Do we still need the draft/ready system for merge requests? | 0 |
