FETC 2023 Data Privacy

Workshop activity 1

What are some of the underlying causes of data breaches in school districts?	Votes
Paul - Teachers that don't understand the severity or long-term ramifications of sharing and exposing student data	6
Paul - Teachers that know a program isn't approved or safe to use, but they really like it so they use it anyway.	6
VP - Lack of accountability for holding people accountable in the district for violating the law. Need to change bargaining unit agreements to include accountability to the laws of Data Privacy.	4
Karen - Staff not really thinking it will happen at their school.	4
VP - The inconvenience of having a product go through the Privacy Law requirements to be approved for use in the classroom.	3
Crissy - Lack of knowledge of the terminology and meaning of the terms.	2
Everyone has their own set of boundaries. Many people don't think about the bad things that can happen.	2
John - Staff (educators) are not being trained and some are under the assumption that ... oh it won't happen here. KNOWB4 training would be a start	1
Eric- Lack of training for staff and students.	1
VP - A small portion are vendors not following the agreements	1
Lauren Berry - There will always be something or someone pushing the limits on our safety and security protocols. The training that is required to be not only aware, but intentional about current Digital Literacy is missing at many state, district and school levels. In addition to training the leaders, we also need to train the students themselves! A student centered classroom cannot run well without positive Digital Citizens modeling that behavior.	0
John - In Iowa, it seems that "Microsoft districts" are being targeted with Ransomware.	0
